AGENCIES WITH BEDLISTS OF 60 OR MORE BEDS AND/OR LONG ASSESSMENTS:

Under the above mentioned conditions, those who have no choice but to run Windows 98 machines will find that Explorer will shut down when checking in a client or running Bed Reports. Netscape Navigator and Mozilla will work very slowly, but do not actually stop working altogether. Therefore we recommend that Users use Windows 2000 or XP (1 GHz models or faster) as the Windows platform to eliminate this problem.
